Unauthorized errors

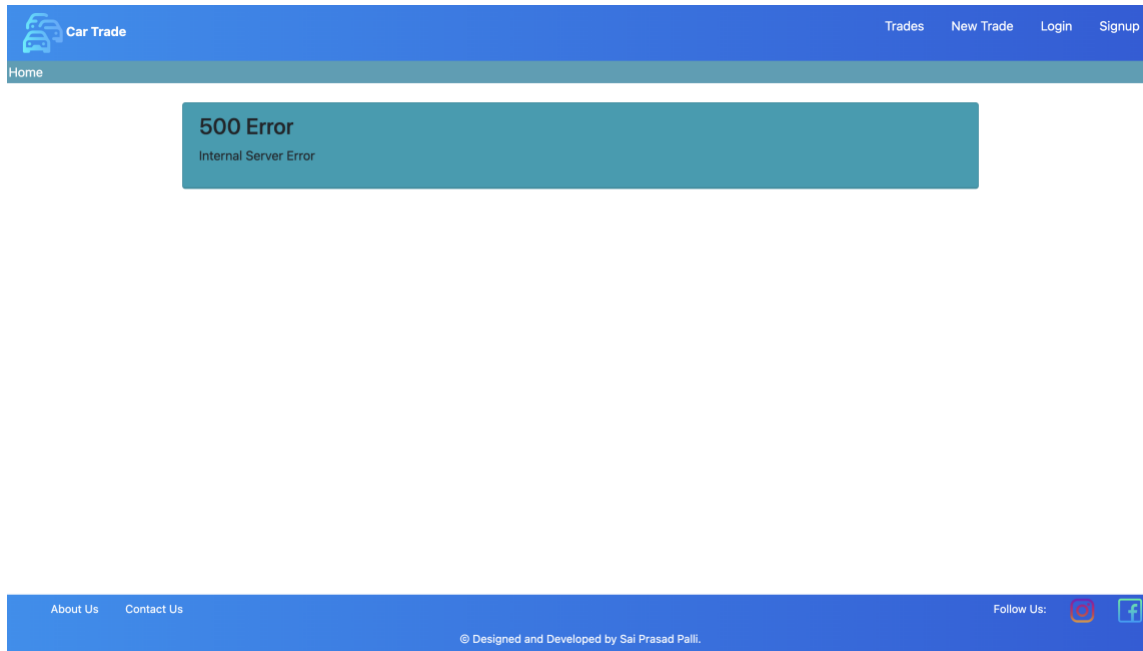

If a user is trying to access a trade (edit/delete) which is unauthorized.

Error Handling:

500 Internal server Error:

When the page which is clicked has 500 Internal server error that means there is a problem inside the server.

2. Explanation of additional features, if any.

As of now I haven't added any special features. I had focused mainly on making the project more dynamic and made sure I meet all the requirements mentioned in the project description.

4. Explanation of status, stopping point, and issues if incomplete.

The project was successfully completed. I had faced some issues and stopping points. But with enough time and lectures in canvas, I was able to overcome those and complete my project with mentioned requirements.

5. Discuss the easy and challenging parts of the assignment. How did you overcome all or some of those challenges?

I had faced challenging when getting the profile page of the users with trades in a table format. But after enough experiments and research I was able to overcome the challenge and successfully complete my project.
